E. SUBJECTIVE PROBLEMS

- 1) a) PQ is a vertical tower. P is the foot and Q is the top of the tower. A, B, C are three points in the horizontal plane through P . The angles of elevation of Q from A, B, C are equal, and each is equal to θ . The sides of the triangle ABC are a, b, c ; and the area of the triangle ABC is Δ . Show that the height of the tower is $\frac{abc \tan \theta}{4\Delta}$.
- b) AB is a vertical pole. The end A is on the level ground. C is the middle point of AB . P is a point on the level ground. The portion CB subtends an angle β at P . If $AP = nAB$ then show that $\tan \beta = \frac{n}{2n^2+1}$.
(1980)
- 2) Let the angles A, B, C of a triangle ABC be in A.P. and let $b : c = \sqrt{3} : \sqrt{2}$. Find the angle A .
(1981 – 2Marks)
- 3) A vertical pole stands at a point Q on a horizontal ground. A and B are points on the ground, d meters apart. The pole subtends angles α and β at A and B respectively. AB subtends an angle γ at Q . Find the height of the pole.
(1982 – 3Marks)
- 4) Four ships A, B, C and D are at sea in the following relative positions: B is on the straight line segment AC , B is due North of D and D is due west of C . The distance between B and D is 2 km. $\angle BDA = 40^\circ$, $\angle BCD = 25^\circ$. What is the distance between A and D ? [Take $\sin 25^\circ = 0.423$]
(1983 – 3Marks)
- 5) The ex-radii r_1, r_2, r_3 of $\triangle ABC$ are in H.P. Show that its sides a, b, c are in A.P.
(1983 – 3Marks)
- 6) For a triangle ABC it is given that $\cos A + \cos B + \cos C = \frac{3}{2}$. Prove that the triangle is equilateral.
(1984 – 4Marks)
- 7) With usual notation, if in a triangle ABC ; $\frac{b+c}{11} = \frac{c+a}{12} = \frac{a+b}{13}$ then prove that $\frac{\cos A}{7} = \frac{\cos B}{19} = \frac{\cos C}{25}$.
(1984 – 4Marks)
- 8) A ladder rests against a wall at an angle α to the horizontal. Its foot is pulled away from the wall through a distance a , so that it slides a distance b down the wall making an angle β with the horizontal. Show that $a = b \tan \frac{1}{2}(\alpha + \beta)$.
(1985 – 5Marks)
- 9) In a triangle ABC , the median to the side BC is of length $\frac{1}{\sqrt{11-6\sqrt{3}}}$ and it divides the angle A into angles 30° and 45° . Find the length of the side BC .
(1985 – 5Marks)

- 10) If in a triangle ABC , $\cos A \cos B + \sin A \sin B \sin C = 1$, show that $a : b : c = 1 : 1 : \sqrt{2}$.

(1986 – 5Marks)

- 11) A sign-post in the form of an isosceles triangle ABC is mounted on a pole of height h fixed to the ground. The base BC of the triangle is parallel to the ground. A man standing on the ground at a distance d from the sign-post finds that the top vertex A of the triangle subtends an angle β and either of the other two vertices subtends the same angle α at his feet. Find the area of the triangle.

(1988 – 5Marks)

- 12) ABC is a triangular park with $AB = AC = 100\text{m}$. A television tower stands at the midpoint of BC . The angles of elevation of the top of the tower at A, B, C are $45^\circ, 60^\circ, 60^\circ$, respectively. Find the height of the tower.

(1989 – 5Marks)

- 13) A vertical tower PQ stands at a point P . Points A and B are located to the South and East of P respectively. M is the mid point of AB . PAM is an equilateral triangle; and N is the foot of the perpendicular from P on AB . Let $AN = 20$ metres and the angle of elevation of the top of the tower at N is $\tan^{-1} 2$. Determine the height of the tower and the angles of elevation of the top of the tower at A and B .

(1990 – 4Marks)

- 14) The sides of a triangle are three consecutive natural numbers and its largest angle is twice the smallest one. Determine the sides of the triangle.

(1991 – 4Marks)

- 15) In a triangle of base a the ratio of the other two sides is $r (< 1)$. Show that the altitude of the triangle is less than or equal to $\frac{ar}{1-r^2}$.

(1991 – 4Marks)

- 16) A man notices two objects in a straight line due west. After walking a distance c due north he observes that the objects subtend an angle α at his eye; and, after a further distance $2c$ due north, and angle β . Show that the distance between the objects is $\frac{8c}{3 \cot \beta - \cot \alpha}$; the height of the man is being ignored.

(1991 – 4Marks)
